

‘Science for All’ is not-for-profit. Our dream is to support everyone in the world to get involved in shaping the future of human knowledge. We recognise that many of the challenges facing the planet today do not have solutions which fall into categories such as ‘public health’, ‘environmental studies’ and ‘education’. Our aim is to bring together experts from these diverse areas to work in partnership with the public, using a combination of free face-to-face events and online tools.

What we do

We train members of the public to get involved in every stage of research, from prioritisation and planning to implementation and evaluation. Our projects include **‘Campfires and Science’ - free regular events** in rural or metropolitan areas where we gather experts around a fire to share and create knowledge with the public.

What we offer to the public

Opportunities to learn how to get involved in doing science, planning projects, gathering and analysing data.

What we offer to organisations and experts

We can run ‘Campfires and Science’ events in partnership with experts or organisations, supporting with:

- data gathering by the public
- sharing and disseminating results

We can also train organisations and experts to **run quality assured ‘Campfires and Science’ events.**

Other services we offer include:

- **evaluating your citizen science projects** and activities, including an **impact assessment** of involving people
- evaluating and **improving how the public are involved** in the work of organisations
- **facilitating and moderating online discussions and decision making** between multiple stakeholders; including the public, government, academia and industry – using a transparent and democratic process

Who is ‘Science for All’?

‘Science for All’ is a growing team of people with diverse experience. The founder and Director, Jack Nunn, has over a decade of experience of working to involve the public in improving health and environmental research and public services. Jack is currently a public health PhD candidate.

Our values

Open – anyone, anywhere can access any of the data – for free

Transparent – all decision making, code, data and documents will be in the public domain

Democratic – all decisions will be made in the open, involving anyone who wants to take part
